When will I find my soulmate? Let me check your astrology chart and see... Some advice for love and relationships... I have an opening for love in the near future... Is there something special I could do tomorrow? I see that you have...

Find Your Perfect Partner Let us match you with the right person! General Advice Gets clarity in your life Psychics Chat & Text Center

About this app →

Free Psychic reading for the first 3 minutes! Chat with our online Psychic readers Having good live psychic advice or a psychic reading when decisions are urgently needed and hard to make, when relationships come...

## Good:

- The chatroom/bot idea is really cool. It's like interacting with a fortune telling chatGPT or a digital magic 8 ball that can talk to you
- color theme is really consistent
- Also offers multiple fortune telling services
- Palm reading with the camera is cool. We can probably create a feature like this by asking the user to take a picture of their palm using their webcam
- There's ratings for these "psychics" which gives users an indicator of which person is "better" even though they're most likely chatbots

## Bad:

- Might be pretty complicated to implement. We'd need to be able to process user input and give them a result that is relevant to what they asked. This might require the use of 3rd party APIs, so we might only be able to consider it if we can demonstrate that we are ready for it
- Targeted towards older women???. The pictures and overall theme of the app suggests that it is oriented more towards an older clientele than one that is young. If we want to make a fortune telling app, we should maybe try catering it more towards a younger audience.

## Good

- Lots of different fortunes to be told (we can maybe make an app that can tell you different fortunes)
  - Lends itself well to agile development
- Lots of forms to convince the user that the app will use it in some way to make more accurate predictions
  - Maybe the questions are being used in some legit way (determine personality based on responses and output "science backed" statements related to said personality)
- Support for multiple languages

## Bad:

- Ugly UI
- No dark mode
- Images look like they were drawn on google drawings
  - We can do better with AI drawings/icons
- Color theme is really inconsistent

Target Demographic:  
Students  
(college/HS), what professors to take, what their grades could be

3 fortune Telling styles for now:

(3 ppl) palm reading/ heartbeat thingy

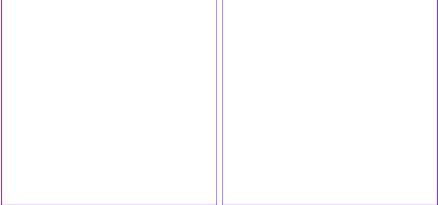

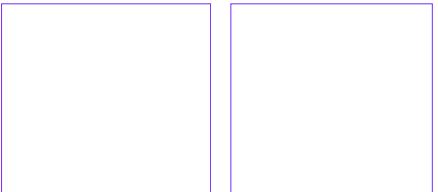

(2 ppl)  
Zodiac/Love Compatibility

(3 ppl)  
Fortune cookie

MVP app home page:

(or I can work on the style/animations)

**choose something**

**each of these squares to the fortune telling method**

sean  
Tyler  
Chi

Owen  
Brandon

Gabe  
Doheon  
Thinh

(2 ppl)  
home page

Work on these if we have time:

Joey  
Devika

Add a feature that selects a random fortune telling app for the user

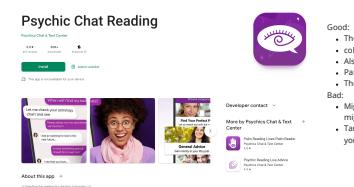

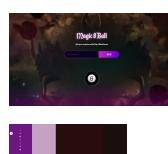

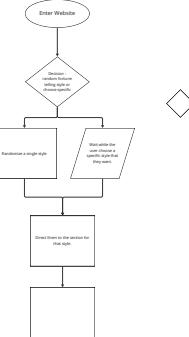

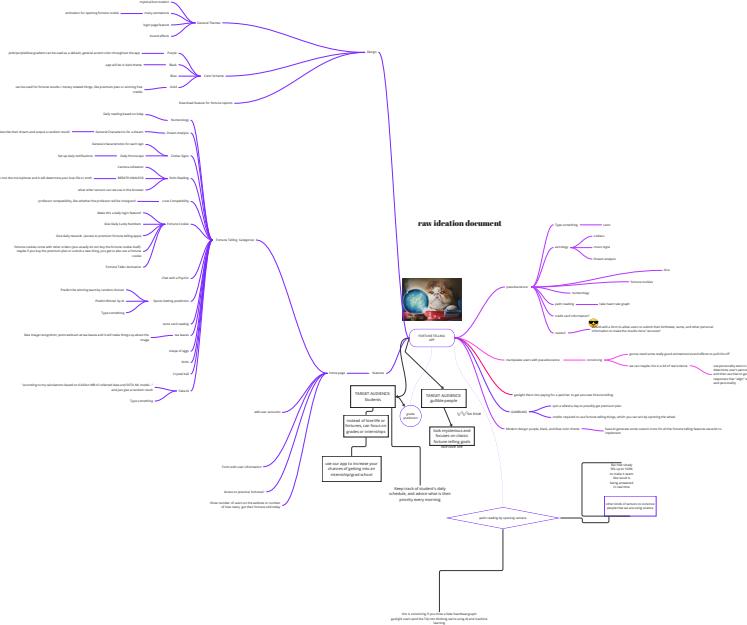

Paper fortune teller

## ROUND 1

- Another idea is really cool. It's like interacting with a fortune telling chatGPT or a digital magic 8 ball that can talk to you multiple times. I think fortune telling services with the camera is cool. We can probably create a feature like this by asking the user to take a picture of their palm using their webcam for these "psychics" which gives users an indicator of which person is "better" even though they're most likely chabot.

This one is really complicated to implement. We'd need to be able to process user input and give them a result that is relevant to what they asked. This would involve the use of 3rd party APIs, which might only be possible to consider if we can demonstrate that we're ready for it.

What do older women? The pictures and overall theme of the app suggests that it is oriented towards an older clientele than one that is interested in making a fortune teller. We should maybe try to categorize it towards a younger audience.

- Good:
    - Lots of different fortunes to be told (we can maybe make an app that can tell you different fortunes)
      - Lends itself well to agile development
    - Lots of ways to convince the user that the app will use it in some way to make more accurate predictions
      - Maybe the questions are being used in some legit way (determine personality based on responses and output "science backed" statements related to said personality)
    - Support for multiple languages
  - Bad:
    - Ugly UI
    - No dark mode
    - Images look like they were drawn on google drawings
      - We can do better with AI drawings/icons
    - Color theme is really inconsistent
